

Take a *close* look at *all* the *advantages* when using Add-It® or Green Machine Pro® fertilizer injectors!

- Very easy to install and simple to operate. Fill the unit with a premixed solution of your favorite totally water-soluble fertilizer, like Scotts Miracle Gro or Peters Professional. Then walk away and forget it. When the irrigation system goes on, water and nutrients are sent to all the plants in the irrigation system. Surfactants (wetting agents) can also be injected to aid in breaking-up compacted soil, root hormones and micro-nutrients to stimulate plant growth, and Vitamin B-1 when transplanting trees and shrubs.
- Available in many sizes: pint, quart, 1/2, 1, 2, 3, 5 and 10 gallon capacity. They are self-contained. Nothing else is required. No other manufacturer offers so many different sizes!
- Totally proportioning (same injection rate from start to finish). Through a unique patented, hydraulic design, a small amount of water is diverted from the main stream of water and forced into the top of the additive tank. An equal amount of fertilizer is drawn from the bottom of the tank, and then forced back into the main stream of water. It's amazing, yet simple!
- Add-It® and Green Machine Pro® can operate under constant mainline pressure up to 125 psi*. They can be installed before a manifold of valves or after individual valves.
- There are no moving parts and nothing to wear out, like other injectors that have gear-driven electric or hydraulic motors or pumps, which eventually will wear out requiring maintenance and/or replacement..
- Easy to drain and refill. No messy tubing or wiring to trip over or unhook to refill.
- Totally proportioning. Distributes fertilizer evenly throughout the irrigation system.
- There is no pressure loss, and no electricity or other power source required for units to operate.
- Perfect for drip or sprinkler irrigation systems. Ideal for drip irrigation systems where you can no longer broadcast dry granular fertilizer and expect it to be leached into the soil by overhead watering.
- Both Add-It® and Green Machine Pro® have received the prestigious AE50 award from the American Society of Agricultural Engineers (ASAE) for innovative product design.
- Durable and Dependable.
- Save time and money when fertilizing. Pays for itself in almost no time at all!
- Best value! Dollar for dollar, both Add-It® and Green Machine Pro® are the most economical injectors of their type on the market today, based on initial cost and cost of fertilizer used.

*Except for small pint Add-It® injector, model AFI 5016-H, rated at 60 PSI.

Fertigation the only easy, efficient, and economical way to apply fertilizer as you irrigate!
