

Fertilize as you Irrigate!

with professional grade, ASAE award winning

Green Machine Pro[®]

Fertilizing is not the labor intensive task it used to be. If you have a drip irrigation system, you already know you can no longer broadcast dry fertilizer and expect it to be leached into the soil by overhead watering, where the roots can absorb it. With a drip irrigation system, the fertilizer has to be in the water as it's applied to the individual plants. This is known as fertigation. The Green Machine Pro Fertilizer Caddy is preset to apply the optimum rate of fertilizer and/or additive that will benefit all the plants on your drip irrigation system, hose-end sprinkler, or conventional sprinkler system. Now you can fertilize without cumbersome spreaders. Simply let the Green Machine Pro Fertilizer Caddy do all the work for you!

The Green Machine Pro Fertilizer Caddy is available in several sizes; 1-½ quart, ½ gallon, gallon and 2 gallon capacities. They are available with hose threads and can be attached to any garden valve or hose bib. They are also available with either ¾" or 1" female pipe threads, and can easily installed after individual control valves. Models with hose threads come complete with an atmospheric vacuum breaker that attaches directly to the hose bib. And, they all come with a fill funnel. The Green Machine Pro Fertilizer Caddy will save you time and money. Best of all, you can use your favorite totally water-soluble granular fertilizer such as Scotts Miracle Gro[®] or Peters Professional[®], Bandini Pro Choice[®], or Grow More[®]. You may also want to consider dispensing a wetting agent (surfactant) like Grow More E-Z Wet Soil Penetrant 26[®] to help breakup compacted soils, compost tea to increase micro-organisms in the soil, micro-nutrients or Vitamin Institute's SUPERthrive[™] containing vitamins and hormones for healthier plants, or vitamin B-1 when transplanting trees and shrubs.

Keep in mind, the Green Machine Pro Fertilizer Caddy is not like many of the other fertilizer injectors on the market today. They are totally proportioning, therefore the injection rate is the same from beginning to end. Through a unique hydraulic design using the kinetic energy of the water flowing through the Green Machine Pro Fertilizer Caddy, a small amount of water is diverted into the tank, and an equal amount of fertilizer and/or additive is forced back out into the flow of water. It's amazing, simple and effective. The Green Machine Pro Fertilizer Caddy is extremely easy to install and simple to operate!
