

# Fertilize as you Irrigate!

with professional grade, ASAE award winning **Add-It<sup>®</sup>**  
**portable proportioning fertilizer injector and foliage feeder**

Model AFI 5016-HV

Fertilizing is not the labor intensive task it used to be. If you have a drip irrigation system, you already know you can no longer broadcast dry fertilizer and expect it to be leached into the soil by overhead watering, where the roots can absorb it. With a drip irrigation system, the fertilizer has to be in the water as it's applied to the individual plants. This is known as fertigation. Add-It is preset to apply the optimum rate of fertilizer and/or additive that will benefit all the plants on your drip irrigation system, or hose-end sprinkler. Now you can fertilize without cumbersome spreaders. Simply let Add-It do all the work for you!

Add-It can be attached to any garden valve or hose bib. Add-It comes complete with an atmospheric vacuum breaker that attaches directly to the hose bib, and a fill funnel. Add-It will save you time and money. Best of all, you can use your favorite totally water-soluble granular fertilizer such as Scotts Miracle Gro<sup>®</sup> or Peters Professional<sup>®</sup>, Bandini Pro Choice<sup>®</sup>, or Grow More<sup>®</sup>. You may also want to consider dispensing a wetting agent (surfactant) like Grow More E-Z Wet Soil Penetrant 26<sup>®</sup> to help breakup compacted soils, compost tea to increase micro-organisms in the soil, micro-nutrients or Vitamin Institute's SUPERthrive<sup>™</sup> containing vitamins and hormones for healthier plants, or vitamin B-1 when transplanting trees and shrubs.

Keep in mind, Add-It is not like many of the other fertilizer injectors or applicators on the market today. Add-It is totally proportioning, therefore the injection rate is the same from beginning to end. Through a unique hydraulic design using the kinetic energy of the water flowing through the Add-It, a small amount of water is diverted into the tank, and an equal amount of fertilizer and/or additive is forced back out into the flow of water. It's amazing, simple and effective. The Add-It Proportioning Fertilizer Injector and Foliage Feeder is extremely easy to install and simple to operate!
